ABOUT ME

Information Technology Engineering (ITE) graduate specializing in Software Applications Development, with experience in full-stack web development using Laravel, PHP, JavaScript, and MySQL, as well as website testing and defect identification. Developing practical DevOps skills in CI/CD pipelines, containerization, and cloud infrastructure, with a focus on application reliability and efficient deployments.

WORK EXPERIENCE

Relink Consulting Paris (Remote), France

Email: info@relink-consulting.fr | **Website:** https://relink-consulting.fr/

CRM Developer (Remote)

01/11/2024 - 31/08/2026

- Led the full project lifecycle for CRM solutions, from initial analysis to design, development, testing, and deployment.
- Worked closely with clients to understand their needs, developing customized CRM systems tailored to business requirements.
- Focused on building seamless integrations with external systems and APIs, ensuring smooth data flow and process automation.
- Managed side projects, which included enhancing existing CRM functionalities and implementing new features to improve user experience.
- Monitored and improved CRM performance through constant analysis of usage data and feedback.

DastN GmbH Berlin (Remote), Germany

Business or sector Information and communication | **Department:** Php laravel developer | **Email:** info@DastN.com | **Website:** https://www.dastn.com/
Link: https://maherkheder1.github.io/Maherkheder1/

Laravel Developer (Remote)

01/10/2022 - 01/10/2024

– working remotely with a distributed development team based in Germany
– developing and maintaining web applications using Laravel framework
– designing and managing MySQL databases
– building and integrating RESTful APIs
– developing responsive front-end interfaces using HTML, CSS, JavaScript and Bootstrap
– optimizing application performance and security
– collaborating with development teams to deliver scalable web solutions

DastN GmbH Berlin (Remote), Germany

Business or sector Information and communication | **Department:** Front-End Development | **Email:** info@DastN.com | **Website:** https://www.dastn.com/
Link: https://maherkheder1.github.io/Maherkheder1/

Front-End Developer (Remote)

01/01/2021 - 01/08/2022

– developing responsive web applications using HTML, CSS and JavaScript
– implementing interactive user interfaces based on UX/UI wireframes
– translating design mockups into functional front-end features
– testing and debugging front-end code to ensure performance and

usability

– collaborating with back-end developers to integrate APIs and application logic

EDUCATION & TRAINING

01/09/2017 - 01/03/2022 Damascus, Syria

Bachelor's Degree in Information Engineering – Software Applications Development Syrian Virtual University

- software engineering and system design
- data structures and algorithms
- object-oriented programming
- database systems and data management
- web engineering and full-stack application development
- software testing and quality assurance

Website: https://www.svuonline.org/en/program/ise **Field(s) of study:** Software and applications development and analysis | **Final grade:** Good (63.7%) – Graduation Project: 87/100 | **Level in EQF:** EQF level 6 | **Thesis:** Knowledge Base – Interactive web platform for managing and sharing company documents using Laravel and MySQL

PROJECTS

01/03/2022 - 01/06/2022

Graduation Project: Knowledge Base Web Application

Graduation project completed as part of the Bachelor's degree in Information Systems Engineering. The project involved designing and developing a full-stack web application for managing organizational knowledge and internal documentation.

The system enables users to create, organize, edit, and share documents through categorized wiki pages and posts, with role-based access control and user management features to improve information accessibility within organizations.

The platform was developed using PHP (Laravel framework) and MySQL database, focusing on usability, security, and efficient knowledge management.

Final Grade: 87 / 100

Link https://github.com/Maherkheder1/Graduation-Project_knowledge-base

01/03/2021 - 01/06/2021

Academic Project: Web Project Management Tool

Academic team project completed as part of the Information Systems Engineering program. The project involved designing and developing a web-based platform for managing software projects and improving collaboration between a software company and its clients.

The system allows administrators to manage users and projects through a dashboard, assign projects to specific clients, and track project progress. Clients can log in to view their assigned projects and monitor the development status.

The platform was designed using HTML, CSS, and JavaScript for the front end, with PHP (Laravel framework) and MySQL database for the back end. The project followed a structured development process including requirement analysis, system design using UML diagrams, implementation, and software testing.

Final Grade: 77 / 100

VOLUNTEERING

10/02/2023 - 15/03/2023 Syria

Volunteer Relief Work – Earthquake Response

Volunteered with a local youth group to assist communities affected by the 2023 Turkey–Syria earthquakes. Contributed to humanitarian relief efforts by helping distribute aid, supporting affected families, and assisting in organizing community support initiatives during the emergency response period.
